

Giulia Manno Lima

Senior Product Designer · Complex Software, AI Tools & Design Systems

Florianópolis/SC, Brazil (remote) · mannogiu@gmail.com · +55 (91) 98434-9050 · linkedin.com/in/giulia-manno-lima · giu-manno.github.io/portfolio-new

Summary

Product designer with 5 years of experience leading UI/UX for complex software: admin systems for technical users, enterprise SaaS suites, and AI-powered products. I work closely with founders and engineers to turn rough requirements into clear flows and polished interfaces, and I validate decisions through user research and usability testing.

AI-assisted design and development tools like Claude Code, Cursor, and Figma's AI agent are part of my daily workflow: I prototype in code and build design systems on code-based component libraries like shadcn/ui. I work remote-first with startups and a US-based product studio, partnering directly with founders in English.

Professional Experience

GT-BAITA · Researcher Designer

RNP Research, Development and Innovation Program · Jul 2025 – Present

- Lead UI/UX for three web products that Brazilian universities and research institutions use to manage authentication and access to services: an admin system for technical users, a member discoverability portal, and a redesigned authentication interface.
- Turned a manual, highly technical configuration process into clear admin flows, wireframes, and high-fidelity designs, grounded in 60+ interviews with technical and non-technical users.
- Partnered with engineering on problem framing, MVP scope, and sprint planning to ship iteratively.
- Built and maintain the design system for all three products on shadcn/ui, and prototype in code with Claude Code and Cursor to validate flows before handoff.
- Refine flows using session recordings and usage data from Microsoft Clarity.

Fetchly Labs · Product Designer & Strategist

US-based product studio, remote · Jun 2025 – Present

- Client: Spheric AI, a web-based applicant tracking system (ATS) with AI-powered recruiting features. Designed the applicant portal, the side of the product candidates use to apply, taking it from discovery and benchmarking through wireframes to final UI, and mentored a junior designer along the way.
- I own Spheric's design direction, working directly with the founders and PM to ship and iterate on features, using PostHog session monitoring to inform design decisions.
- Lead product discovery across client engagements, working with founders and CEOs to turn business goals into requirements, user flows, and design direction.

Norus · Product Designer

Brazilian energy market SaaS, in-house · Mar 2024 – Jun 2025

- Co-led, with one other designer, the unification of three complex energy trading applications into one SaaS suite with shared login, data, and navigation.
- Designed the suite's visual identity, information architecture, and core flows, including a nested navigation pattern that keeps users oriented across dense, multi-product workflows.
- Built the design system on MUI from scratch in close collaboration with front-end developers, with components, documentation, and handoff workflows.
- Introduced design critiques, dev handoffs, and design reviews to an engineering team new to design, raising consistency and the fidelity of shipped screens.

SiDi (Samsung R&D Institute Brazil) · UX/UI Designer

Part-time · Aug 2022 – Dec 2023

- Designed UX/UI improvements for an internal authoring tool used by Samsung's global teams to build dialogue trees for the Bixby voice assistant.
- Owned a help center feature end to end: interviews with six regional leads (Brazil, Europe, India, Korea), the FAQ layout, and a standardized article template.

EquipeDigital.com · Social Media & Web Designer

Part-time · May 2021 – Mar 2022

- Designed and prototyped responsive websites and landing pages.

Skills

- **Product design:** UI/UX for complex software applications, user flows, wireframes, prototypes, high-fidelity design, information architecture

- **User-centered design:** user research, interviews, usability testing, heuristic evaluation; product data with PostHog, Google Analytics, and Microsoft Clarity
- **Design systems:** components, documentation, and handoff in collaboration with front-end engineers; MUI, shadcn/ui, Bootstrap
- **AI and code:** Claude, Claude Code, Claude Cowork, Cursor, Figma's AI agent; prototyping in code
- **Tools:** Figma
- **Visual design & accessibility:** typography, hierarchy, layout, WCAG
- **Languages:** Portuguese (native), English (fluent, professional)

Education

Postgraduate Degree in User Experience Design and Beyond · PUCRS Online · May 2026 – Present

Bachelor's Degree in Design · Federal University of Santa Catarina (UFSC) · 2019 – 2023

Research & Mentorship

- **PIBIC-CAPES research scholarship, UFSC (2021 – 2022):** accessibility in graphic and experiential design
- **Volunteer design mentor:** PAQ, Prototipando a Quebrada (2025) and Technovation Girls (2024)
